

The immune system destroys red blood cells faster than they are made.

### Hemolytic anemia

The immune system attacks insulin-producing pancreatic cells, causing high blood sugar.

### Diabetes mellitus T1

It causes the thyroid to overproduce hormones, leading to hyperthyroidism.

### Grave's disease

The immune system damages nerve coverings, disrupting brain-body link.

### Multiple sclerosis

## Autoimmune diseases

### Addison's disease

The immune system damages the adrenal glands, reducing hormone production.

### Systemic lupus

The immune system attacks multiple organs and tissues, causing inflammation.

### Rheumatic arthritis

The immune system attacks joint linings, causing inflammation and pain.

### Crohn's disease

It causes chronic inflammation in the digestive tract.
